Noida, Uttar Pradesh - 201306, India

SUMMARY

Software Development Test Engineer (SDET) with hands-on experience in manual and automated testing of enterprise desktop applications, including a public-safety records-management platform. Skilled in defect investigation, test case design, and test automation using Selenium WebDriver, Playwright, RestAssured, and Cucumber (BDD) with TestNG across the SDLC/STLC.

SKILLS

- **Test Automation** : TestComplete (Desktop Automation), Selenium WebDriver, Playwright, RestAssured, Cucumber (BDD), TestNG
- **QA & Testing** : Manual Testing, API Testing, UI Automation, Regression Testing, Functional Testing, Test Case Design, Defect Life Cycle
- **Programming** : Java, C++, SQL, JavaScript
- **Tools & CI/CD** : Git, Jenkins, Azure DevOps (ADO)

EXPERIENCE

- **GlobalLogic (Hitachi Group of Companies)**  Jan 2026 - Present
Software Development Test Engineer Noida, India
 - Perform manual and automated QA for a public-safety / justice records-management platform (US government client), spanning test case design, defect investigation, and fix verification across the STLC.
 - Investigate and reproduce defects tracked in Azure DevOps (ADO), documenting reproduction steps and expected-vs-actual behavior to support faster resolution.
 - Design, document, and execute functional test cases across multiple application modules, validating application behavior and data integrity against requirements.
 - Verify bug fixes and feature changes across pull requests through regression and functional testing to confirm resolution without introducing regressions.
 - Automate functional testing of desktop application using TestComplete and structure test scenarios using Behaviour Driven Development, maintain and fix existing test automation codebase to keep regression suites stable and reliable.

PROJECTS

- **AI-Powered QA Productivity Assistant (Vibe coded)** July 2026
Tools: [FastAPI, Python, Anthropic Claude (AWS Bedrock), MCP, Azure Devops, python-docx, PySide6, Cytoscape.js, pytest] 
 - Build a QA productivity assistant (FastAPI backend, Javascript UI) that fetches Azure Devops work items, comments, and linked items and generate an LLM driven analysis of what and why changed to accelerate ticket investigation.
 - Automated UI and code-level test case generation using Claude via AWS Bedrock with structured tool use, and implemented a preview-and-confirm workflow to push generated testcases directly into Azure via MCP.
 - Ability to generate formatted Word test-case document with python-docx from captured steps and screenshots, built a PySide6 desktop overlay for step-by-step screen capture.
 - Developed a structural impact analysis graph using Cytoscape.js to surface likely affected components, grounded LLM analysis in code knowledge graph via autonomous tool-use agent loop, covered core logic with a pytest suite.
- **US Market Customer Segmentation for Credit Fear Group** Jun 2023 - Jul 2023
Tools: [Python, Pandas, Scikit-learn, Plotly, StatsModels, Seaborn] 
 - Developed a customer segmentation model to identify distinct user groups, enabling targeted marketing strategies for high-value customers.
 - Applied Principal Component Analysis (PCA) for dimensionality reduction, improving model efficiency and interpretability.
 - Implemented K-Means clustering on behavioral and demographic data to uncover actionable insights and optimize customer engagement.

EDUCATION

- **Graphic Era Hill University, Dehradun, India** Jul 2021 - Jul 2025
B.Tech in Computer Science GPA: 8.2/10
 - **Relevant Coursework:** Data Structures & Algorithms, Database Management Systems (DBMS), Machine Learning (ML), Distributed Systems.
